STORM DRY

A colourless, breathable water repellent

DESCRIPTION

Storm Dry is a colourless, breathable water repellent treatment for brick, concrete and stone walls. It is supplied in the form of a deeply penetrating “cream” that is applied to the wall surface in a single coat using a roller or brush. Once Storm Dry has been applied it will permeate deeply into the masonry before curing to form a water-repellent barrier.

Storm Dry is based on carefully selected silanes and siloxanes which line the pores of the masonry to form a water repellent matrix. Because it works by lining the pores rather than blocking them, the masonry is allowed to breathe and does not suffer from an increased risk of frost damage (spalling). Due to its novel formulation and deep penetration, Storm Dry is highly resistant to UV light and other forms of degradation, resulting in a life expectancy of 20-30 years.

BENEFITS

- Easy to apply
- Provides water and rain repellency
- Reduces heat loss
- Single coat application saves time
- Easy to estimate quantity of product required
- UV resistant – long life expectancy
- Does not block pores – allows substrate to breathe
- Alkali resistant – can be applied on freshly pointed walls.
- Deeper penetration of substrate

TYPICAL APPLICATIONS

- Protection against penetrating damp
- Improving thermal efficiency of masonry by keeping it dry (energy saving)
- Maintaining thermal properties of cavity wall insulation
- Improving flood resistance of masonry

APPLICATION

Storm Dry should only be applied to dry porous surfaces that have been thoroughly cleaned beforehand. It should not be applied over sealed or painted surfaces and is intended for above-ground use only. Apply using a clean roller or brush.

COVERAGE

Each litre covers approximately 5sq m.

SAFEGUARD
